

# Continuous Integration & Delivery (CI/CD) in DevSecOps

**Obaid ur Rehman**

Software Architect / Engineering Manager @ **Folio3**

# Introduction

- Software Architect / Engineering Manager at **Folio3**
- BS(CS) University of Karachi 2006, MS(SPM) FAST-NUECS 2010
- Over 17+ years of professional experience.
- Architected & Delivered numerous highly scalable, enterprise level applications in industries like Wall street trading systems, ecommerce, consumer applications.
- Part of Leadership team at the Folio3 Cloud Practice.

# CI/CD: Agenda

- CI/CD in the DevOps cycle
- What is CI/CD
- Delivery v/s Deployment
- Benefits of CI/CD
- Pipelines
  - A typical CI/CD Pipeline
- CI/CD Tools / Provider
- Real world example
- Hands on CI/CD using Github Actions

# DevOps

# DevOps

# The DevOps Cycle - 7 Cs

# What is CI/CD?

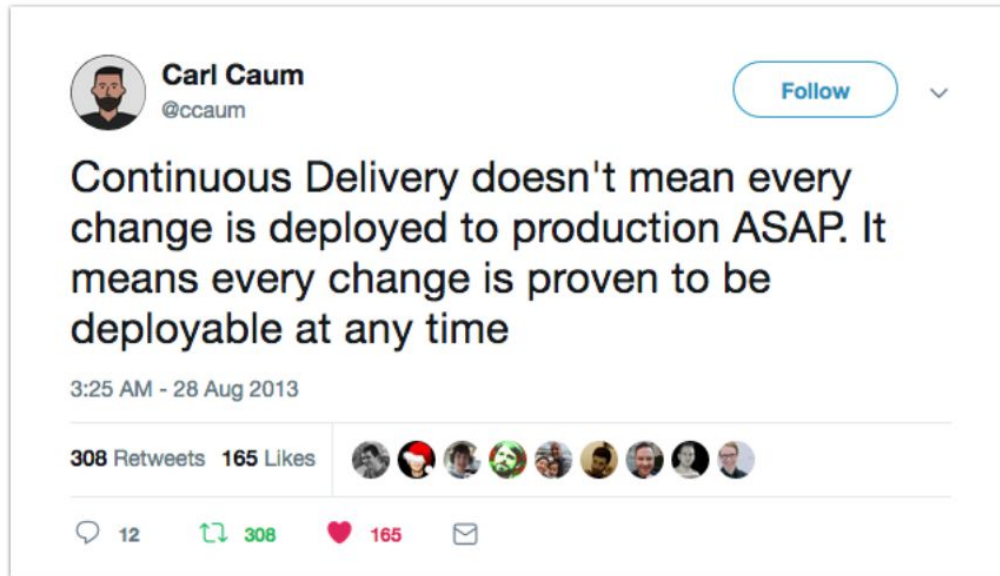

## Continuous Integration

An approach to continuously **validate the state** of your codebase in the repository by building/compiling it.

## Continuous Delivery / Deployment

An approach to continuously deploy artifacts that pass the CI Phase to some environment.

# Delivery V/S Deployment

# Continuous Delivery V/S Deployment

## **Continuous Delivery**

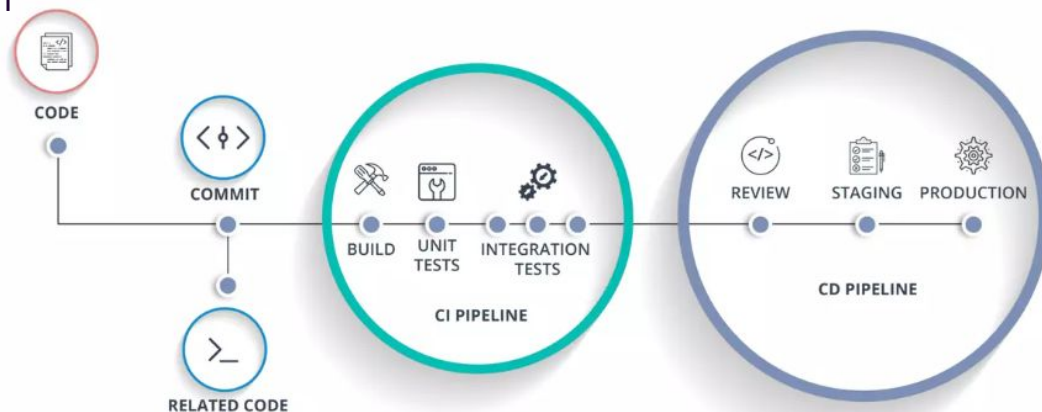

Automatically prepare and deploy to Production with a manual approval.

## **Continuous Deployment**

Continuously deploy artifacts that pass the CI Phase to some Environment.

# Why CI & CD?

- Smaller **changes in code - visibility**
- **Continuous Testing** in place
- Early **Fault detection**
- **Faster Release** to Production
- Rapid **Feedback**
- Customer **satisfaction**

# Benefits

# What is a pipeline?

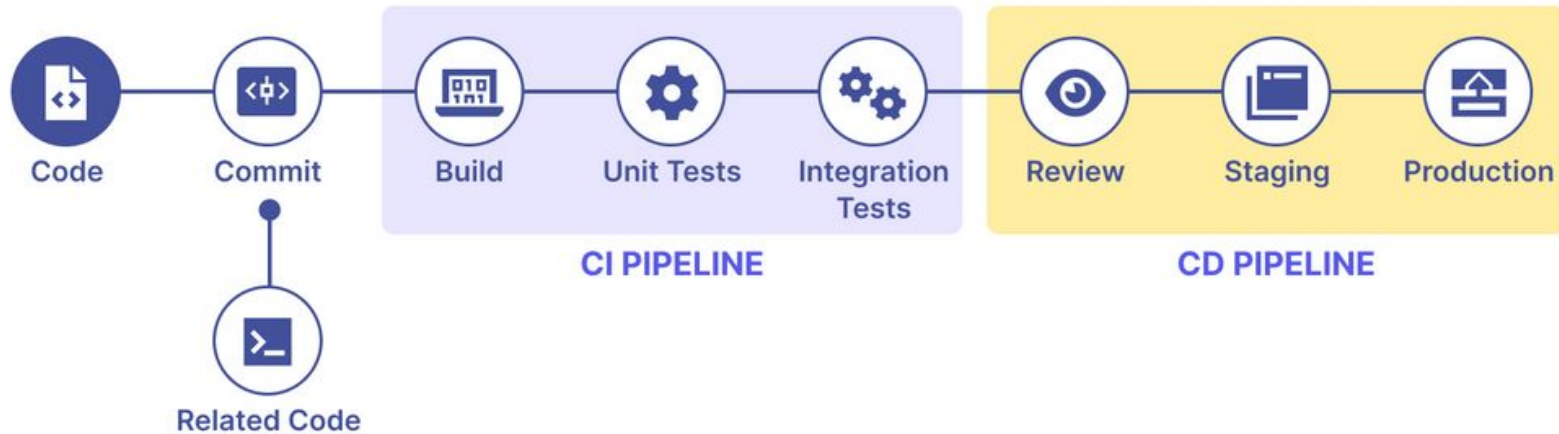

- A route from development to production.
- Within a CI/CD pipeline, a software release artifact moves and through various stage of the pipeline right from the code check-in stage through the builds → tests, deployment.

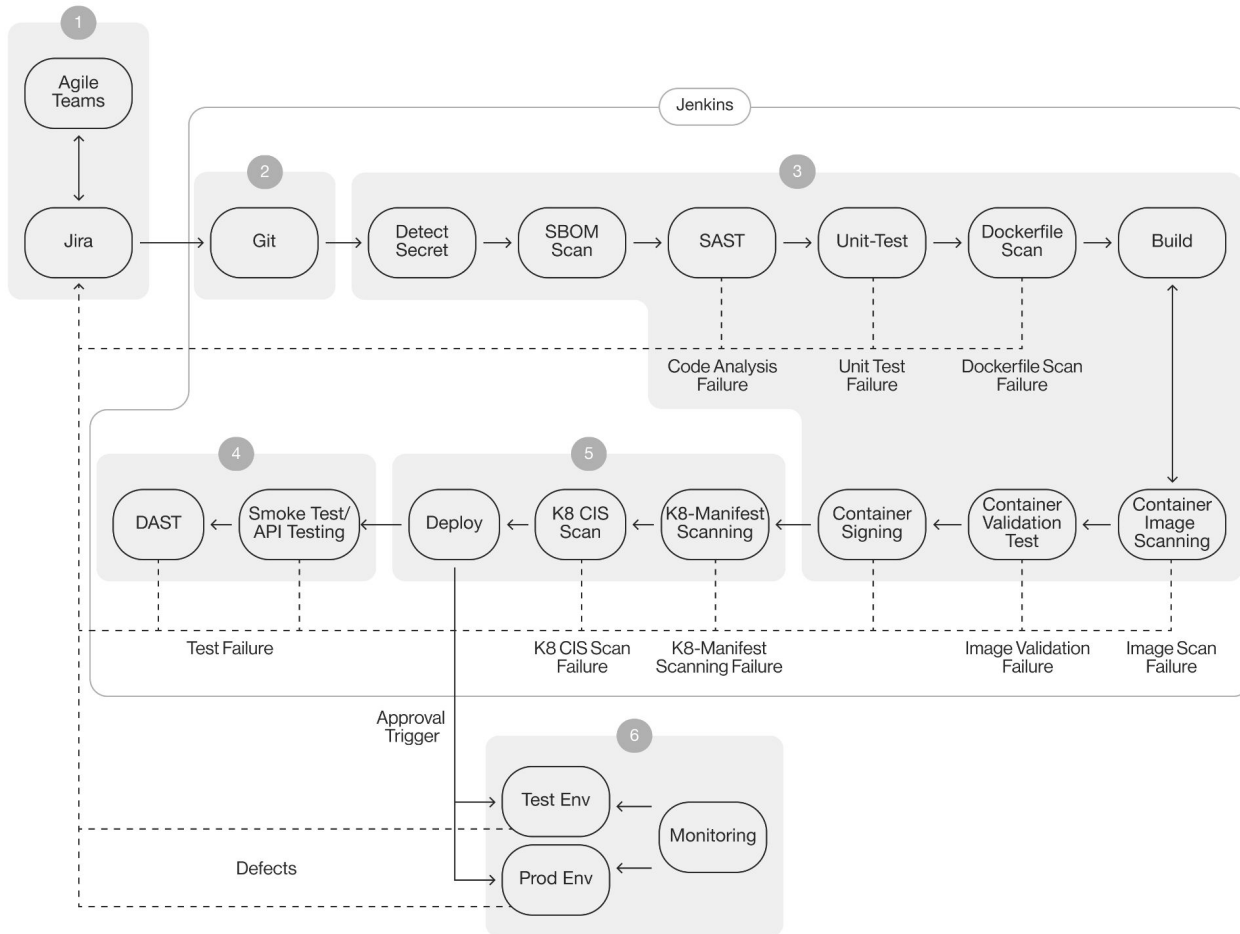

# A Typical CI/CD Pipeline

## Bringing CI/CD Together

# DevSecOps Tool chain

SAST:  **Bandit** nodejsscan   **snyk**

SBOM:   
aqua  
trivy

Container Scan:  **Docker Scout**

K8 Manifest Scanners:   
aqua  
kube-bench

DAST:  **Pentest  
Tools**

# Popular CI/CD Providers

GitHub

GitLab

TeamCity

Jenkins

Travis CI

CircleCI

Codeship

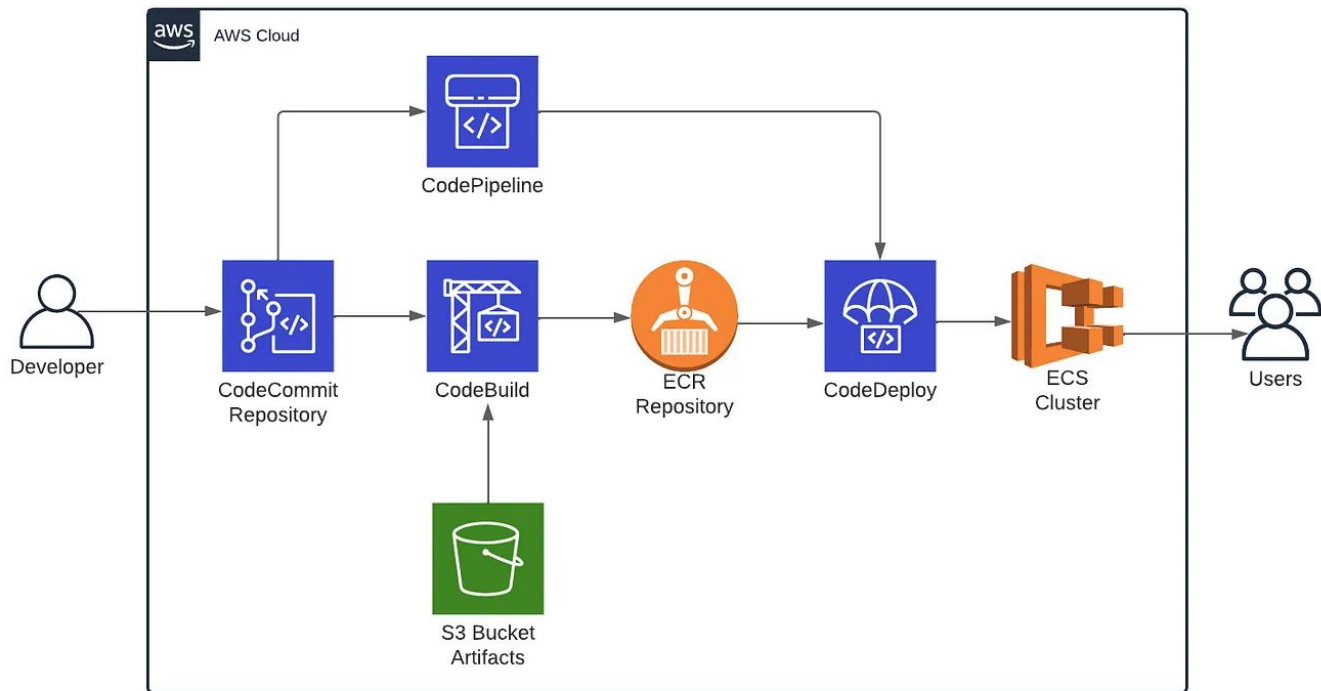

Deploybot

# CI/CD in the Realm of Cloud

# Real world example - CI/CD on AWS

# Lab: GitHub Actions Hands-on

Checkout code

**Build** → docker image → **Test** → **Push** it to  
docker hub repository.

**Requirements:** Github Account, DockerHub  
account and some very basic Python

**The End**
